# Chronic Care Division

- We observed the top 1000 ED-goers (0.1% of patient population) and found that they account for **10%** of visits to EDs in the region.
- The top 1000 ED users show a **higher prevalence of social risk** than other ED users, and experience lower provider continuity.
- We propose the creation of a **chronic care division (at SV)** to regularly care for these patients, alleviating pressure on temp ED staff, and improving provider continuity.
- Looking at two primary EDs, we noticed that all of the top 1000 ED-goers moved away from **Junction Hills** to **Topeka**, while others did the opposite.
